Project Objective

1.University Admit Eligibility Predictor is a boon to many students. This helps the students not in filling out the application forms but also give the students an idea about their future university.

2. When students come from rural places, they find it hard to go along with the formal procedures. So, this application helps them a lot and eases out their fear.

3. Whatever may be their scores, this web application helps to find the best colleges.

4. The machine learning algorithm is performed to predict the opportunity of a student to get admitted to a university.

5. Hence, our application will help the students to get the list of all universities in which they could get the admission at the click of a button.

6. The main objective of our project is to make the right choice of colleges.

7. Regression model is used in predictive analytics to forecast trends and predict outcomes.
